Partnerships for a heterogeneous world

A secure foundation at global scale

Each **physical datacenter**
protected with world-class,
multi-layered protection

Over **100**
datacenters
across the
planet

Global cloud infrastructure
with custom hardware and
network protection

Secured with cutting-
edge **operational security**

- Restricted access
- 24x7 monitoring
- Global security experts

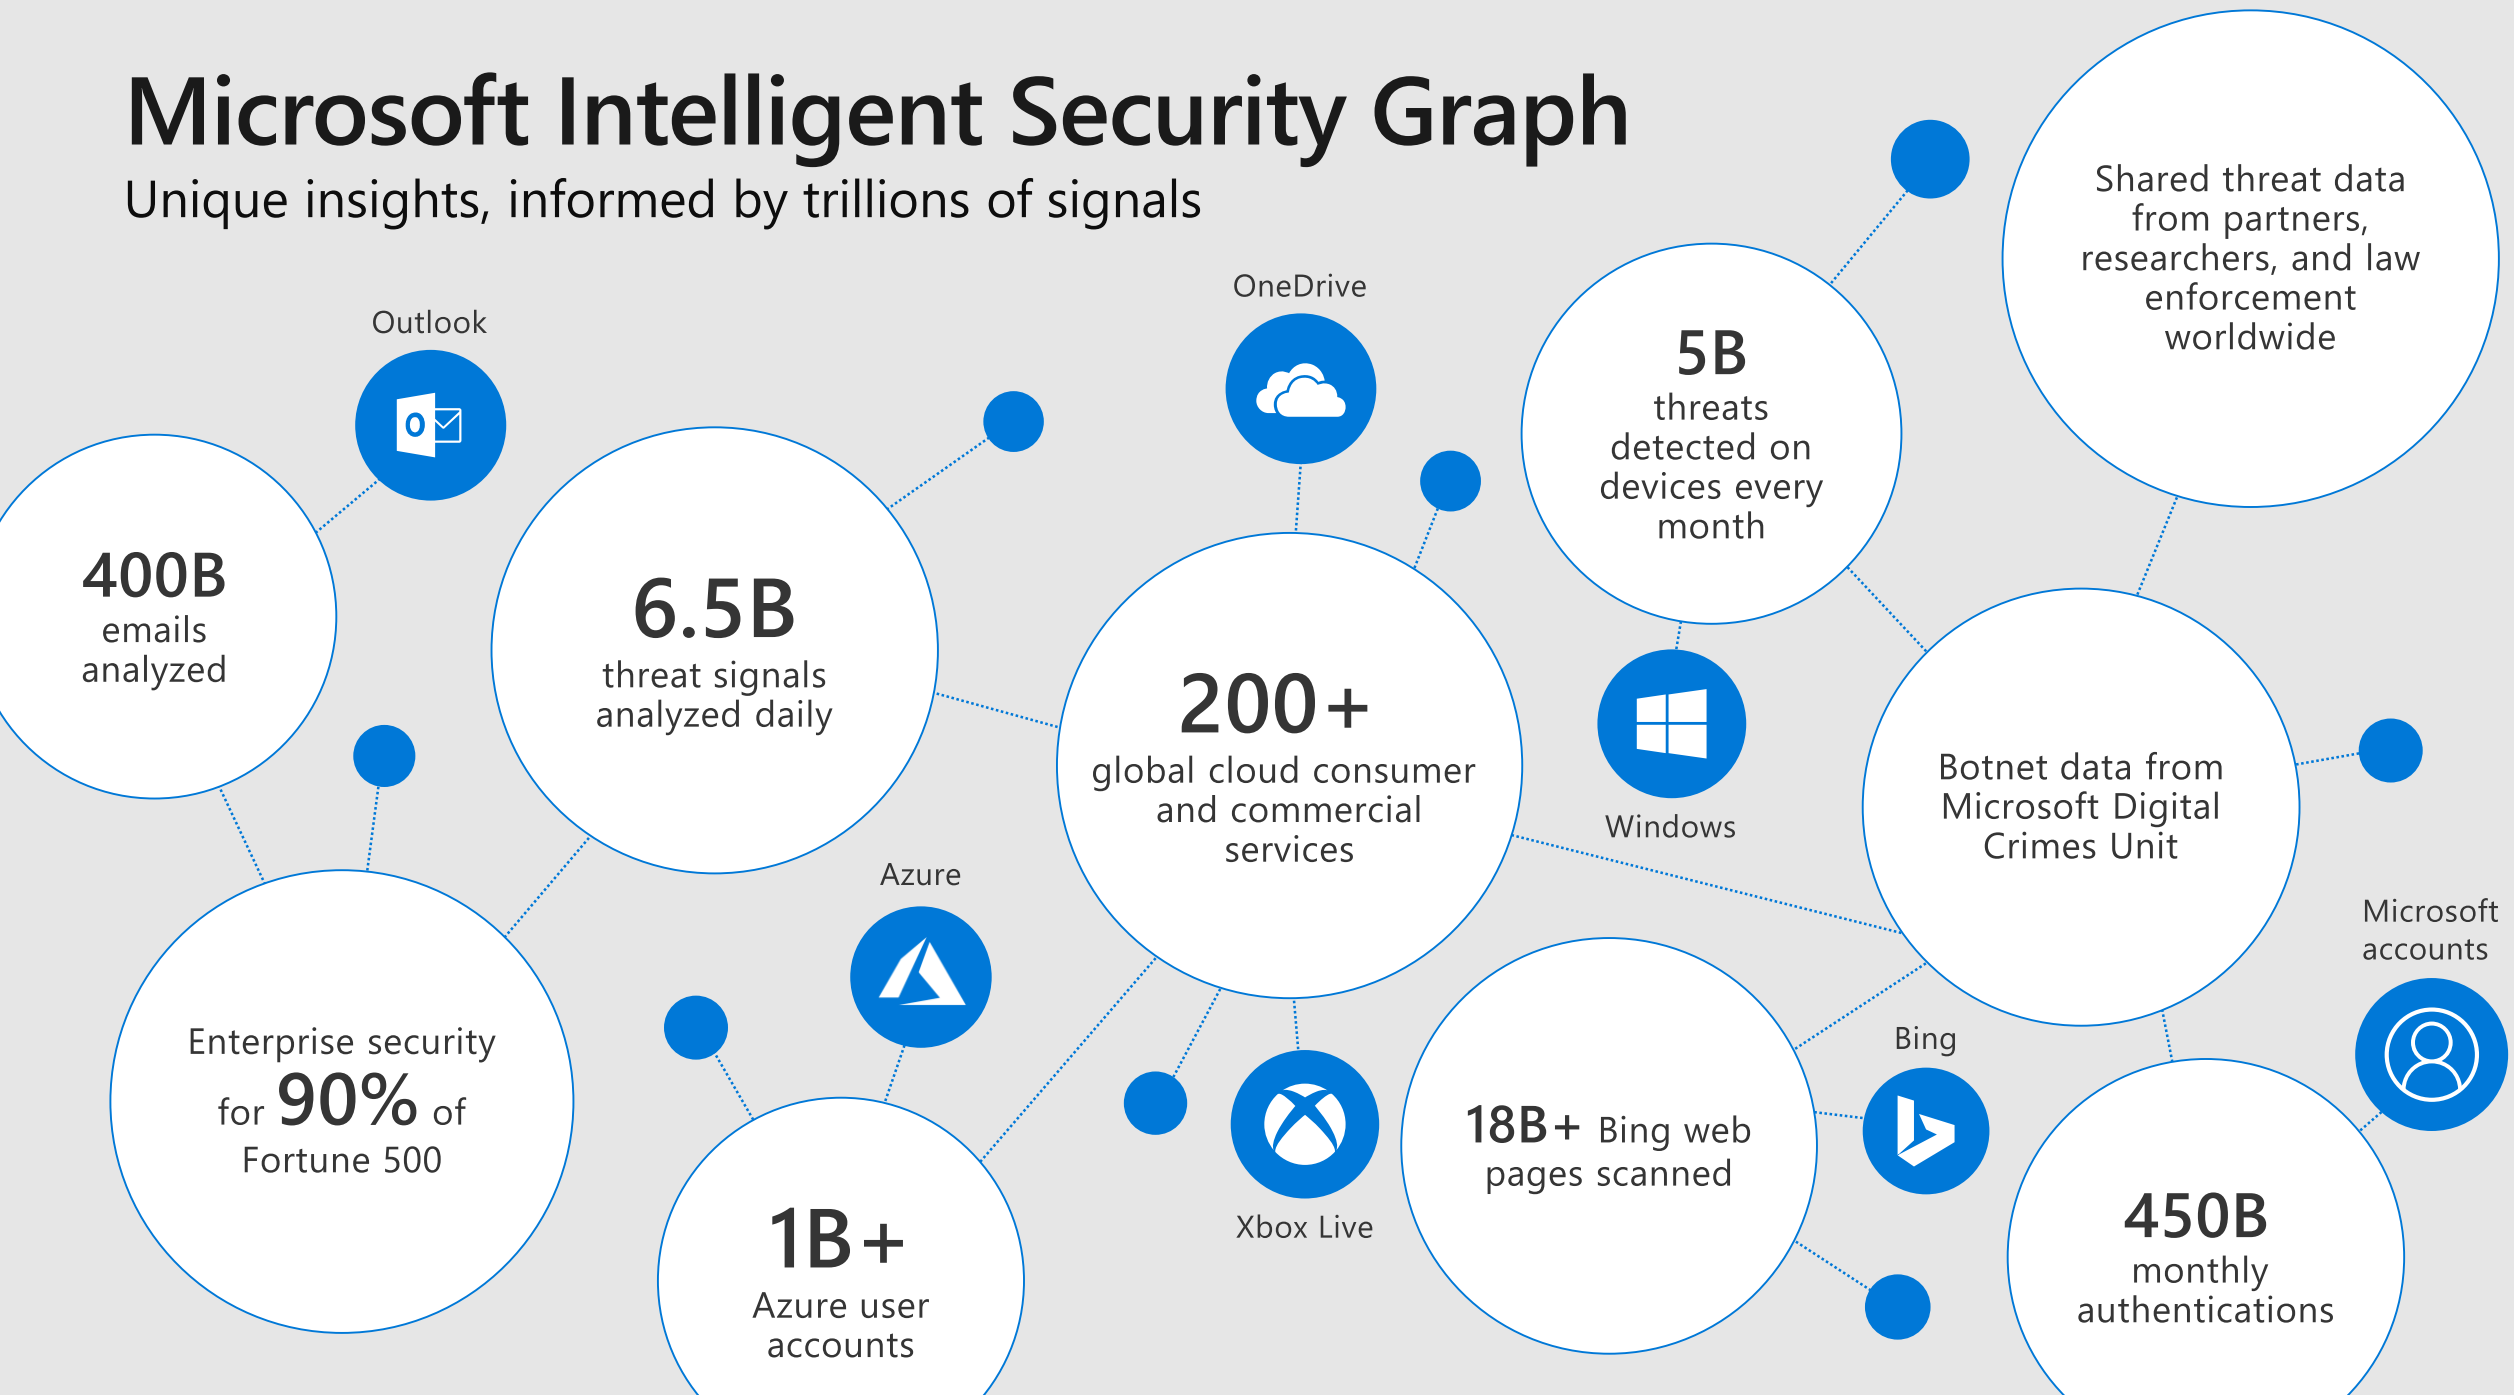

The image shows a large, modern security operations center (SOC). In the foreground, several operators are seated at long desks, each with multiple computer monitors displaying data. The background features a large wall of digital displays. On the left, a screen shows various charts and a '90%' indicator. In the center, a screen displays a world map with a network overlay. On the right, another screen shows a world map with a network overlay. The room is dimly lit, with overhead lights providing illumination. The overall atmosphere is professional and high-tech.

Security operations that work for you

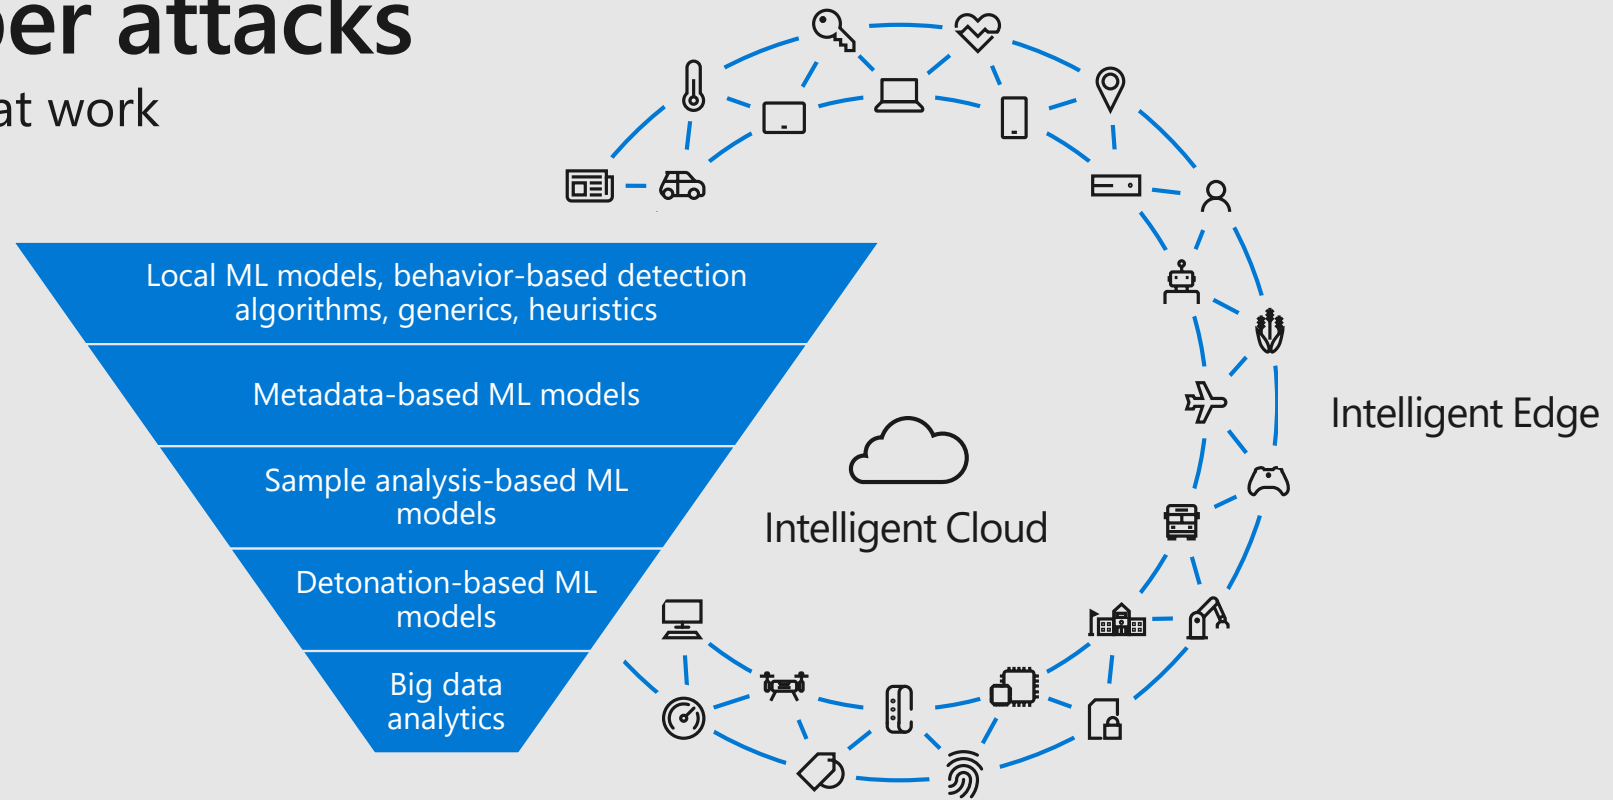

Microsoft Intelligent Security Graph

Unique insights, informed by trillions of signals

Stopping cyber attacks

Real-world intelligence at work

October 2017 – Cloud-based detonation ML models identified [Bad Rabbit](#), protecting users 14 minutes after the first encounter.

March 6 – Behavior-based detection algorithms blocked more than 400,000 instances of the [Dofoil](#) trojan.

2017

2018

February 3 – Client machine learning algorithms automatically stopped the malware attack [Emotet](#) in real time.

August 2018 – Cloud machine learning algorithms blocked a highly targeted campaign to deliver [Ursnif](#) malware to under 200 targets

Stopping cyber attacks

Real-world intelligence at work

- Emotet: Patient zero to quarantine in milliseconds
- Ursnif: Spotting the needle in the haystack
- Phishing campaigns

Azure AD
Conditional Access

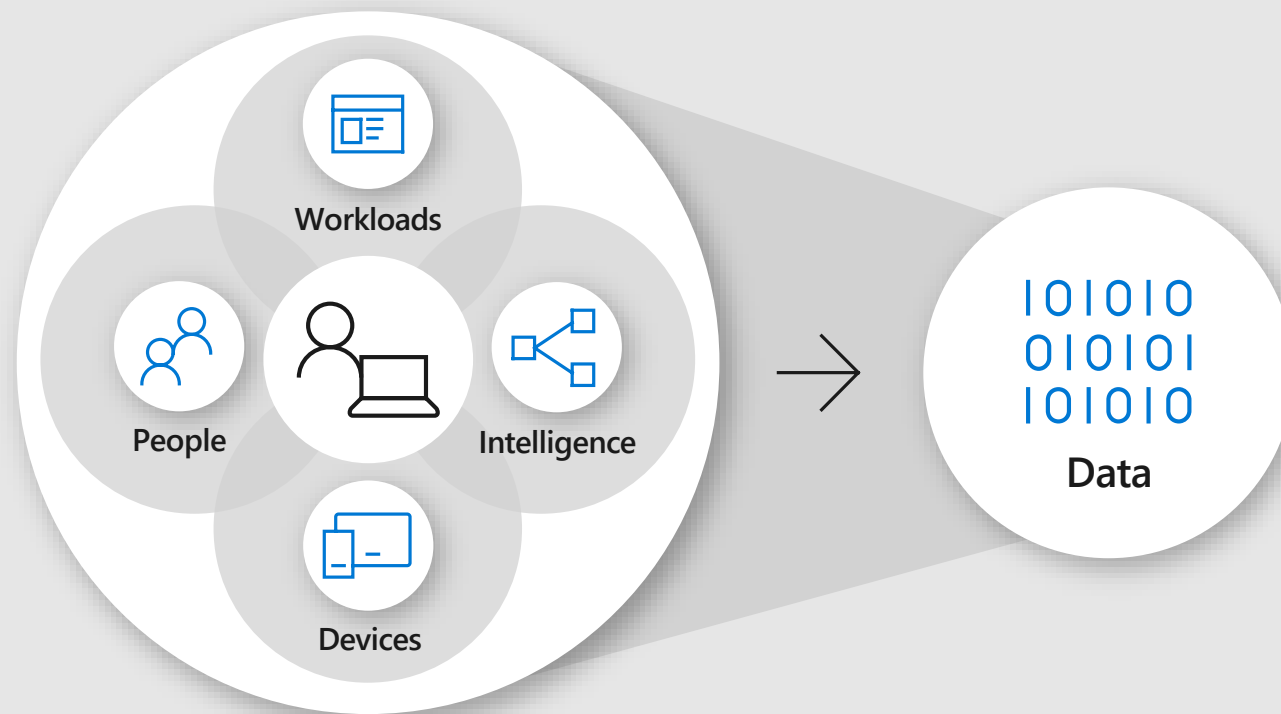

Application

Real time risk

Conditional access

Implement Zero Trust with
Azure AD Conditional Access

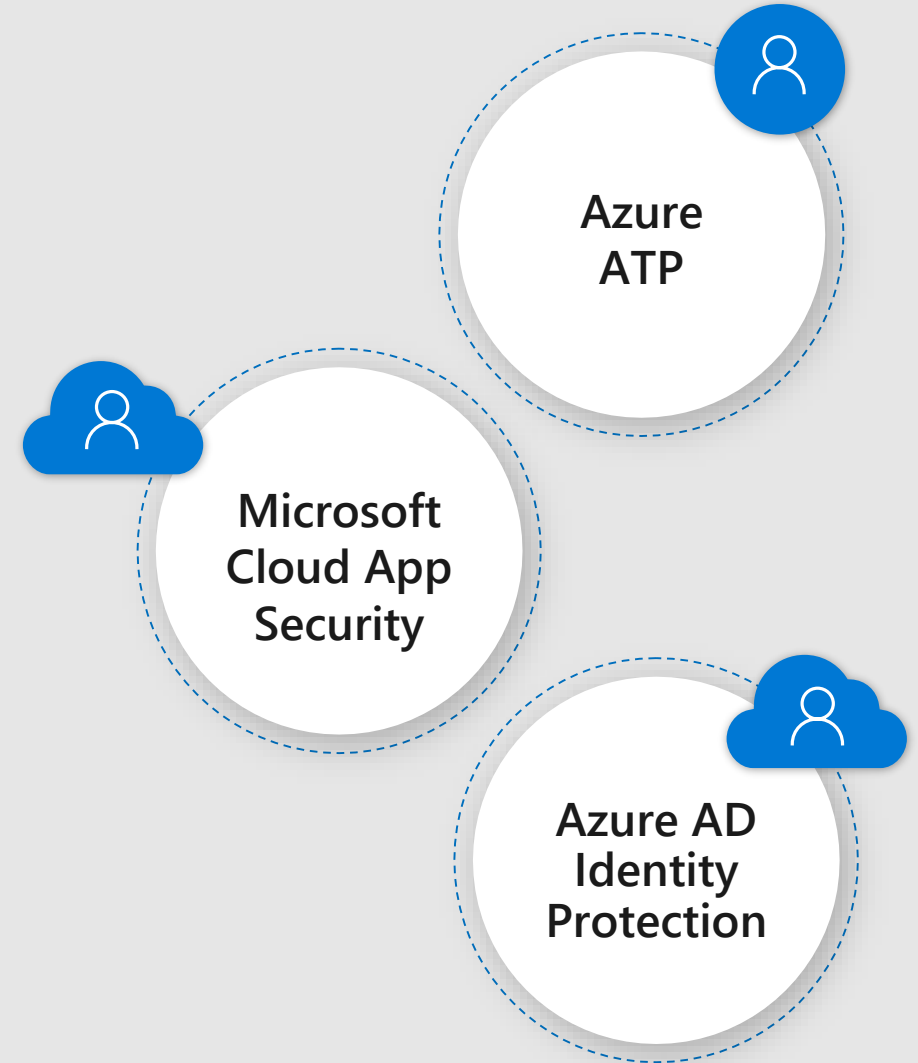

Identity protection

An integral component of Microsoft Threat Protection

One SecOps experience to **investigate identity activities across on-premises & the cloud**

Consolidated view of user information and insights

Investigation priority based on User and Entity Behavior Analytics

Identity & access management

Turn on MFA

Protect your apps with Azure AD conditional access

Begin your password-less journey

Information protection

Information protection

- Fragmented policy → Unified taxonomy
- Scattered knowledge → Rich dashboards
- Poor user enforcement → Intuitive experiences

Microsoft Information Protection

Locate and classify information anywhere it lives

Discover & classify
sensitive information

Apply protection
based on policy
