Database Migration

## Azure Database Migration Service (DMS)

# Комплексная служба миграции баз данных

Полностью управляемый сервис миграции баз данных для операционных баз данных, хранилищ данных и баз данных NoSQL

Из локальных, частных облаков и публичных облаков

Гомогенные и гетерогенные пары источник-мишень

Минимальное время простоя миграции

Текущий фокус:

\*надежность и производительность. Итеративное

\*добавление пар источник-цель.

**Надежная и плавная миграция в Azure**

# Варианты Мигра

The screenshot displays the 'Migration Wizard' application window with the 'Migration source detail' view. The breadcrumb path is 'Home > RajpoPPE > Migration Wizard > Migration source detail'. The main window title is 'Migration Wizard MigrateToSQLDB'. A search bar at the top right is labeled 'Source SQL Server instance name'. Below this, a 'testmigration' window is open, showing a toolbar with 'Delete migration', 'Stop migration', 'Refresh', and 'Download report' buttons. The configuration section includes 'Source server <source server>', 'Target server <target server>', 'Source version', and 'Target version'. Under 'Databases', there is one entry: 'AdventureWork...'. A search bar below the databases is labeled 'Search to filter items...'. A table below the search bar has columns: NAME, STATUS, SIZE, MIGRATION ..., and DURATION. The table contains one row: 'AdventureWork...' with status 'Pending'. To the left of the table is a vertical sidebar with a search icon and a list containing 'Azu' and 'Dat'. To the right of the table is a box labeled 'Migration Service (DMS)'. Below the table, there are two blue arrow-shaped buttons labeled 'Sync' and 'Cutover'. At the bottom left, there is a box containing 'Data Mi'. The overall layout is a screenshot of a web-based migration management tool.
